

**IN THE SPECIFICATION**

Please amend the specification as follows:

**The paragraph beginning at page 2, line 6 is amended as follows:**

As part of handling the returned page that is loaded into a browser instance, the content that makes up that page may be associated with a security zone, such as described in U.S. patent application Ser. No. 09/055,772, assigned to the assignee of the present application and issued as U.S. Patent No. 6,366,912 on April 2, 2002. The association of the content with a security zone is based on the content's source, such as the web site from which it was obtained, e.g., as determined from its URL (Uniform Resource Locator, or URI, Uniform Resource Identifier). For example, a URL starting with "http://:www" may be associated with an Internet security zone.
